 **LINUX FOUNDATION**
COLLABORATIVE PROJECTS

Review checklist

- Proposal posted for 2 weeks: was originally posted March
- Project lead: Michael Young (michael.y@huawei.com)
- Trademark check: no TESS records found for ONOSFW; only four matches containing “ONOS”– all dead
- Description: on wiki
- Scope: First release includes integration of ONOS controller into what BGS and CI evolve into for OPNFV release 2; some minimal multi-tenancy support to reconcile various Linux namespace issues; a ML2 Neutron driver for ONOS
- NFV requirement: Heterogeneous SDN controller support; VIM-based network control; Ability to provision physical network resources into virtual resources, and then to allocate virtual resources
- Resources committed: 4 committers and 17 contributors, across 8 companies
- Committers to be elected: Michael Young, Patrick Liu, Prakash Ramchandran, Zhao Kexue
- Meets BOD IPR: All new code will be Apache v2 based, and we will administer the DCO to developers before any code is committed to OPNFV repos, will also propagate any upstream licenses that may be in effect.
- Proposal has been socialized via email list and discussion meeting for 1 month with no unaddressed questions

Thank You...
